The following is an examiner's statement of reasons for allowance:

Applicants' claimed invention is directed to a process for producing carboxylic acid, which comprises reacting aldehyde-containing oily solution with an aqueous hydrogen peroxide solution in the presence of a catalyst comprising a polymer compound having a sulfonic acid group in a side chain thereof in a heterogeneous solution system.

The prior art such as, US patents 4,4549,025 and 4,093,649 disclose processes for oxidizing aldehydes to carboxylic acids with alkali metal or alkaline-earth metal chloride in the presence of hydrogen peroxide. However, the prior art of record neither teaches nor suggests a catalyst comprising a polymer having a sulfonic acid group in a side chain in a heterogeneous system. Nor would it have been obvious to modify the process of the prior art to arrive at the instant invention. There is no motivation to do so.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
